

Preventive Generics Drug List

Preventive care coverage is an integral part of a comprehensive health care plan that includes preventive drug therapies. Under some plans, you may not be required to pay a copay, coinsurance and/or deductible for preventive medications.

Preventive medications are those prescribed to prevent the occurrence of a disease or condition for those individuals with risk factors, or to prevent the recurrence of a disease or condition for those who have recovered, and do not include drugs used to treat an existing illness, injury or condition.

Preventive medications are those used for the prevention of conditions such as high blood pressure, high cholesterol, diabetes, asthma, osteoporosis, heart attack and stroke, and prenatal nutrient deficiency.

Below is a list of brand-name preventive medications that have generic equivalents. You can also check the Drug List on myCIGNA.com for more information and new updates to this list.

Preventive medications on the Drug List are indicated with a "PM" after the drug name. Refer to your plan materials to determine if your plan includes a preventive medication coverage feature.
